

PROPOSAL

It is proposed to continue research on problems critical to a clarification of the fundamental aspects of the stimulus-response relationship in biological systems. Studies will be conducted utilizing chronic animal preparations with permanent septal electrodes. Investigations will be conducted utilizing chronic electrode preparations coupled with selected classical types of conditioning. Studies will be conducted on the geography of the brain in selected species of animals to determine the locus in which stimulations will produce specific reactions.

A careful literature survey, especially of the Russian literature, of foreign research in this area will be conducted.

Project: MKULTRA, Subproject 106

106 1

Date Initiated: January 1961

Date Expires: January 1962

Funds-current year: \$12,000.00

Purposes: To provide consulting service and Slavic language literature review of various foreign biological and psychological areas technology related to BW.

Status: The project is in its second year and is continuing to produce adequately.

MEMORANDUM FOR: CHIEF, FINANCE DIVISION

VIA : TSS/Budget Officer

SUBJECT : MEULTRA, Subproject 106, Invoice #1  
Allotment 0525-1009-4902

1. Invoice No. 1 covering the above subproject is attached.  
Payment should be made as follows:

B Cashier's check in the amount of \$841.00 payable  
to [REDACTED] drawn  
on [REDACTED] Back.

C Cashier's check in the amount of \$21,014.00 payable  
to [REDACTED] drawn on  
a [REDACTED] Back.

2. Please forward the checks to Chief, TSS/Chemical  
Division through TSS/Budget Officer by 10 February 1960.

3. This is a final invoice. However, since it is anticipated  
that additional funds will be obligated for this project, the files  
should not be closed.

## MEMORANDUM FOR: THE RECORD

SUBJECT : MKULTRA, Subproject No. 106

1. It is proposed to continue research under MKULTRA subproject No. 106 on studies of biological systems with particular reference to quantifying the relationship between a stimulus and the biological-response to that stimulus. Problems arising from the difference in excitability and behavioral response among members of an animal population will be analyzed. By means of animal preparations particularly suitable for demonstrating specific functions, evaluations will be made of biological generalizations arising from the use of one species of animal as an experimental variable. A critical review will be maintained of selected foreign literature especially that on the neurophysiological mechanism of conditioning and related behavioral research.

2. Because of the very low level of effort on which this program is to be continued during the next year, reimbursements will be made directly to Mr. [REDACTED] the chief investigator, on the basis of his invoices for professional services rendered at the times that these

occur. No intervening cutouts will be required as were used in the previous program.

3. Funds required for this program for one year amount to \$3,000.00. Charges should be made against Allotment No. 2125-1390-3902.

4. It is not anticipated that any permanent equipment will be needed for this program.

5. The requirement for a semiannual informal accounting has been waived.

6. All personnel connected with the planning and monitoring of this program possess Agency Top Secret approval.

D R A F T  
29 December 1959

MEMORANDUM FOR: THE RECORD

SUBJECT : MKULTRA, Subproject 106

1. The purpose of MKULTRA subproject 106 is to undertake studies on biological systems with particular reference to quantifying the relationship between a stimulus and the biological response to that stimulus. The lack of a general understanding and adequate methodology for handling this relationship in a realistic fashion is one of the major roadblocks to rapid technical progress in the fields of assessment and control of behavior at the present time. It is planned to utilize an interdisciplinary approach in this research with emphasis on the side of the physical sciences. Several advanced mathematical techniques and physical models have been suggested as fruitful research areas not presently being exploited. Problems arising from the difference in excitability and behavioral response among members of an animal population will be analyzed. An attempt will be made to elucidate relationships between lower animals and man by comparing physiological, biochemical, and behavioral characteristics. By means of animal preparations particularly suitable for demonstrating specific functions evaluations will be made of biological

generalizations arising from the use of one kind of animal as an experimental variable. A critical review will be made of selected foreign literature especially that on the neurophysiological mechanism of conditioning and related behavioral research. Particular reference will be made to the recent shift on the part of the Russians from the strict "Pavlovian" view to a more realistic approach to the problem.

2. The [REDACTED] will function as cut out and cover for this subproject. The necessary research will be conducted by [REDACTED], who will submit to the [REDACTED] a summary accounting of funds at the conclusion of the program. Any unused funds remaining at the conclusion of the program will be returned to the [REDACTED]

B  
3. Funds required for this program for one year amount to \$21,014.00. To this sum must be added \$841.00 representing a four per cent service charge to the [REDACTED] making the total amount \$21,855.00. Charges should be made against Allotment No. 0525-1009-4902.

4. It is not anticipated that any permanent equipment will be needed for this program. It has been agreed that documentation and accounting for travel expenses which are reimbursable by

It is proposed to mount the initial phases of a program aimed at an eventual clarification of the fundamental aspects of the problem of stimulus - response relationship in biological systems. The present theoretical models and concepts in this area are not only inadequate but also represent roadblocks to further progress in the evaluation and control of biological systems, including man. (See work such as Loewe, S. Science, 130, pg 692, 1959) The development of practical tools for this work in the form of chronic animal preparations with permanent septal electrodes has lately opened the door to effective research in this area.

Initially the work will consist of a careful literature survey, especially of the Russian literature, coupled with various classical types of conditioning experiments using the chronic electrode preparations available from animal guidance programs. Later, the results of these experiments will be pooled with those involving standard drug effects on the same preparations to design critical experiments aimed at providing new abstract models for these phenomena.

It is planned that during the first year one investigation can complete the literature work and with a minimum of help carry out the initial animal studies required for the design of several definitive experiments to be carried out during the second year. The form of these experiments cannot presently be visualized because of the inadequacies of present knowledge.
